

ClipMorph

Take your videos to the next level!

OUR TEAM

Arthur Louette

Laurie Boveroux

Axelle Schyns

Sacha Lewin

The background is a gradient of blue and purple. Scattered throughout are several spheres of various sizes, some with a blue-to-purple gradient and others with a purple-to-blue gradient, creating a dynamic, abstract effect.

Videos as you have never seen

ClipMorph is an application using Deep Learning and computer vision techniques to enhance the creativity of *your* videos.

PROBLEM

- More and more digital content
- Harder to stand out from the others
- No tools or expensive ones
- Blandness

Use case

01

Apply a Style

User can apply a predefined style from our catalog to its videos

What we did

02

Define new styles

User can add a new image to be used as the style reference for its next video

What we 'failed' to do
"GPU not available in
your location"

Use case

01

Apply a

User can a
from our ca

02

Define

User can a
as the style

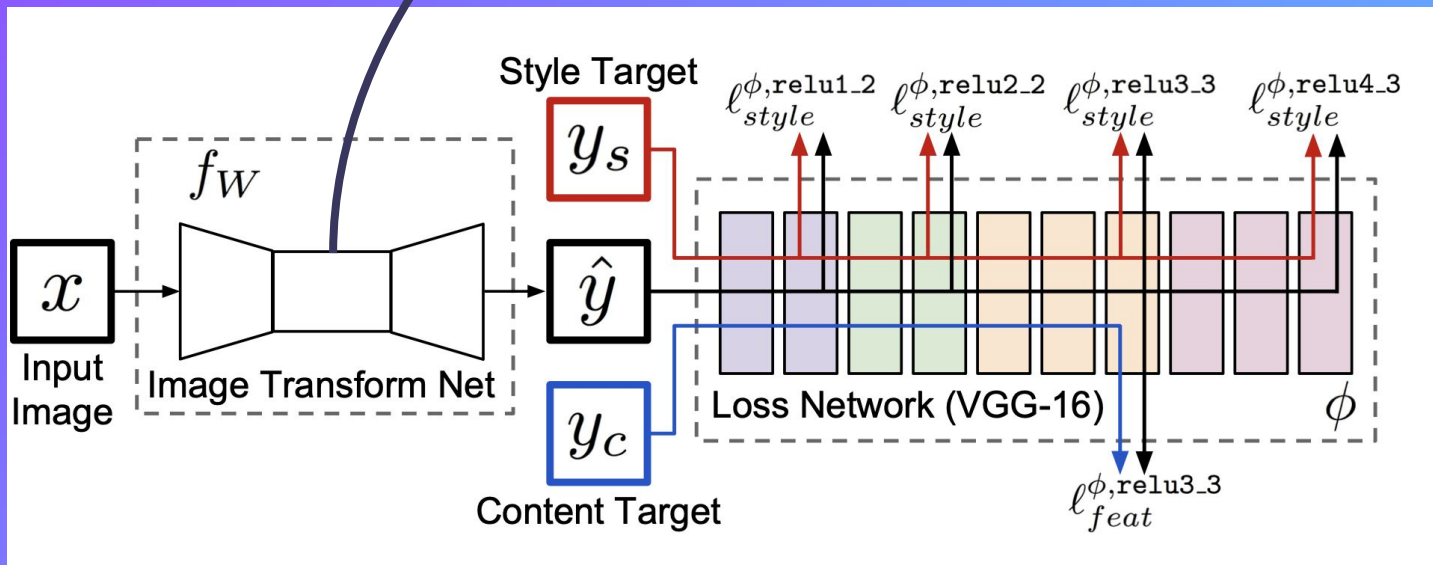

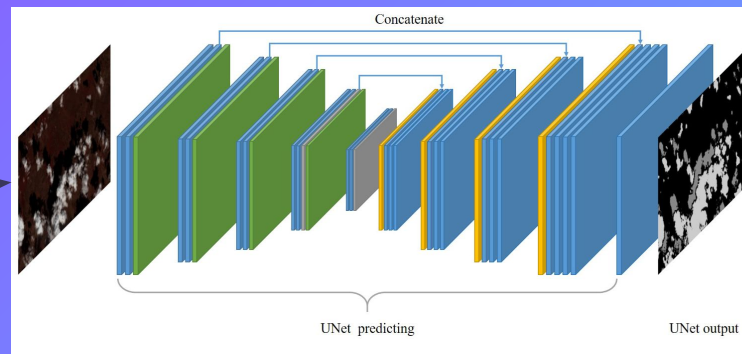

did

failed to do
available in
ocation"

Model

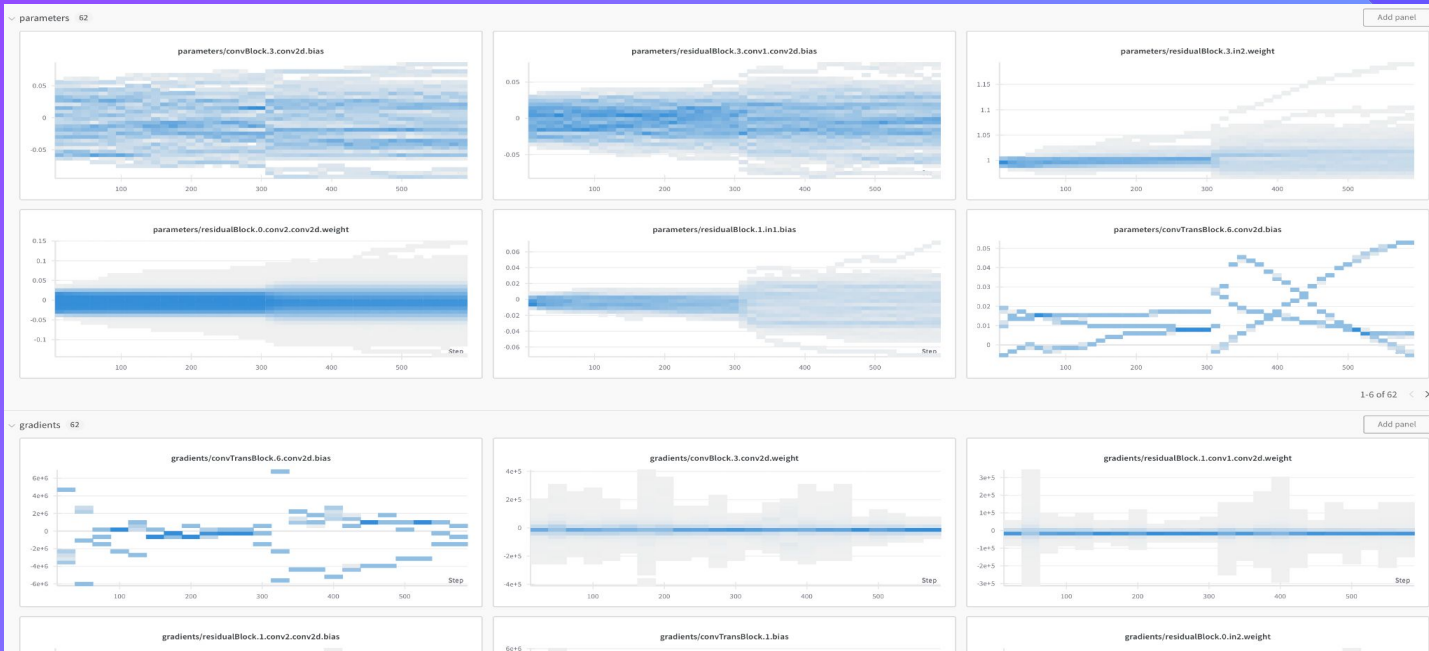

U-Net + Perceptual loss using a backbone

- Good inference speed
- Nice results
- Easy training

Model Development

➔ Addition of Weight and Biases + optimization

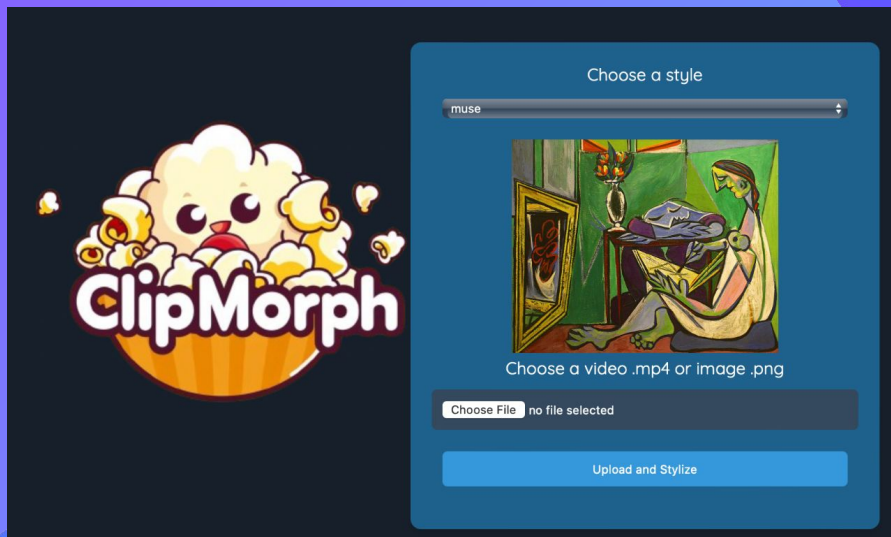

Product Early Demo

Model Deployment

- Flask
- Docker
- Google Cloud
Run on CPU

<https://clipmorph.isach.be/>

Demonstration

CLIPMORPH

CICD

1. **Continuous integration through github actions**

With PyTest

2. **Code style tests**

With Ruff

3. **Continuous deployment**

of our Flask Web API to Google Cloud Run
